PAGE D · NOT LINKED FROM THE PAGE · NOT INDEXED

Setup

The sheet that produces a page. Nothing here is a login and nothing here is protected, because there is nothing behind it to protect — it is a form that writes files. Fill it in, copy the output, paste it into the file, publish.

D1 Page header

A standing page can leave the date blank. A running series must set it: the date then appears in four places and all four must agree, and this sheet writes all four from the one field.

SERIES NAME

Washakie AI

SUBJECT LINE

simple, single-topic websites generated by .

DATE

10/20/2026

EYEBROW (SMALL LINE ABOVE THE TITLE)

A proposal from a resident of Worland

THE CLAIM — ONE SENTENCE, IN BOLD. ON A STANDING PAGE THIS IS YOUR PROMISE; IN A SERIES IT IS THE ONLY LINE THAT CHANGES.

A $10,000 request to the Wyoming Business Council for a twelve-month pilot program: twelve working websites, four public workshops, and a method published free.

DATELINE CHIP

one award · one time · nothing to renew · the county owns the result

A PROPOSAL FROM A RESIDENT OF WORLAND

Washakie AI · simple, single-topic websites generated by AI · October 20, 2026

TODAY'S CLAIM

One day's progress, presented three ways.

A $10,000 request to the Wyoming Business Council for a twelve-month pilot program: twelve working websites, four public workshops, and a method published free.

COLOPHON: this issue was produced on 20 October 2026
```

D2 Front image

Which picture heads the page. Type the file names that are sitting in the issue folder, one per line; the chooser lists them and shows what you picked. Captions are set at 22px, larger than body text, because a caption is often the only thing a scanning reader reads.

(no front image)

D3 References

One card per external source. Order is fixed: kind, title, provenance, preview, why it is cited, then the link last. The link goes last on purpose — put it first and readers click it before reading the preview, which defeats the whole column.

1 | Primary · source | remove

title

provenance — who, when, what license

preview — what you would find if you went there

why it is cited — what it is doing in THIS report

https://... (goes last in the card)

Add a reference | Copy the reference blocks

```
<article class="ref" id="r1">
  <span class="rnum">1</span><span class="rkind">Primary · source</span>
  <div class="rtitle"></div>
  <div class="rmeta"></div>
  <div class="rprev"></div>
  <div class="rwhy"><b>Why it is cited:</b> </div>
```

```
  <a class="rlink" href=""></a>
</article>
```

D4 Link health

A browser cannot test somebody else's link — a cross-origin request comes back with no status attached, so an in-page checker reports healthy links as dead. The check therefore runs on a schedule, away from the reader, and writes the small file below. Tick anything known dead and give the date it was found.

DATE OF THE LAST CHECK

10/20/2026

Copy links.json

```
{
  "checked": "2026-10-20",
  "dead": {},
  "note": "All sources reachable at the last check."
}
```

> **If in doubt, leave it empty.** A missing or empty `links.json` makes the page say nothing at all about link health. That is the correct default: no file means no claim, and never a false alarm.

D5 Publish

For someone who has used neither GitHub nor GitHub Desktop before. Two words to learn: **Commit** is "save this version with a note." **Push** is "send it to the internet."

1. Save `index.html` in the folder GitHub Desktop made for you.
2. Open **GitHub Desktop**. Your changed files are listed down the left.
3. Type one line in the **Summary** box saying what changed.
4. Click **Commit to main**.
5. Click **Push origin**.
6. Wait about a minute, then load the page with `?v=` and today's date on the end — the host caches for ten minutes and you will otherwise be looking at yesterday.

> **Everything else in that application can be ignored.** Branches, pull requests and merges exist and are irrelevant to a one-person daily record. You will not need them, this year or next.
