A PROPOSAL FROM A RESIDENT OF WORLAND

Grass-Roots AI for Washakie County

> **You describe what you want, in your own words. Your AI does the work for you.**
>
> No course to take, nothing to install, no technical jargon to learn. The only skill it asks is describing the result you want, the way you would to a person — which is why it belongs in a county of eight thousand, not only in a city.

WHAT THIS IS

AI from the ground up, where people live and work: a working website for their farm, shop or office — ideal for individuals and small businesses. Development is still ongoing, but it is well past the proof-of-concept stage, and the first step is to present it to the University of Wyoming in Laramie. The second is a $10,000 request to the Wyoming Business Council for a twelve-month pilot program in Washakie County — twelve working sites, four public workshops, and the method published free.

one award · one time · nothing to renew · the county owns the result

CHEYENNE, WYOMING

3 JUNE 2026

Gordon orders “responsible” data center development in Wyoming

SUMMARIZED FROM REPORTING BY CLAIR MCFARLAND · 3 JUNE 2026

PHOTO: GOVERNOR’S OFFICE

Governor Mark Gordon, who issued the order.

The Governor has issued an executive order directing state agencies to promote the responsible development of data centers and other large-load facilities in Wyoming.

Agencies are to minimize water use with cooling technology “appropriate for Wyoming’s semi-arid climate,” balance growth with wildlife and open space, keep “open and continual communication” with the public, and protect residential and small-business utility customers from costs that belong to data center builds.

The order seeks to “attract investment across Wyoming” with “meaningful benefits for local governments,” and to prepare citizens for careers in digital infrastructure through the University of Wyoming, community colleges, school districts and businesses.

The full report is at cowboystatedaily.com, and is previewed as source 9 in the middle column.

Every clause is about data centers. None is about a county of 7,600 people putting AI to work.

This proposal is written in the new format it proposes to introduce into the county, **GYR-O Pages** — simple, single-topic websites generated by AI.

GYR-O = **G**reen · **Y**ellow · **R**ed · and sometimes **O**range

Green, yellow and red are the three columns every reader sees: plain answers, sources, technical detail. The page that builds them is orange.

SOME EXAMPLES ALREADY IN SERVICE

worland-dog-law.online

An unofficial portal concisely presenting the town's dog laws, guided by audits by Claude AI of both the official site's user interface, and the logically-convoluted ordinances themselves. The first GYR-O Pages website, and still a quintessential example.

baconian-ciphers.online

A daily record of academic research into the historical origins of the world-changing Binary Code, based on extensive use of Digital Image Processing.

gyro-sites.online

The technical reference.

Other sites +

Samples of what the pilot program would make.

THE PAGE LAYOUT BELOW IS STANDARD ON EVERY GYR-O SITE

What comes after the pilot program?

What is the catch?

B SOURCES ✓

HOW TO READ A CARD

Every card below reads the same way, top to bottom. Parts 4 and 5 are the ones a bare footnote never gives you.

1. **Number and kind** — what sort of thing it is
2. **Title** — what it is called
3. **Provenance** — who made it, when, under what license
4. **Preview** — what you would find if you went there
5. **Why it is cited** — what it is doing on this page
6. **The link** — last, and only last

An article, a photograph, a map, a book, a dataset and a film, each carded: see every kind at work →

INTERNAL LINKS

The two most recent content changes, and the record behind them.

24 September 2026 — the Chamber of Commerce named as a candidate sponsor, with its open question

The most natural body on the list and the least certain: its own site gives a 501(c)(7) designation, which is not the one a chamber of commerce usually holds. Whose question that is, and in what order to ask it, is in column C.

24 September 2026 — who is who, redrawn as an organization chart

The same five roles as before, now in ranked boxes with right-angle connectors, and the ambassadors on a broken outline because nobody has asked them yet.

Chronicle — what has been happening, and why

The whole record in plain language, newest first: how this proposal has changed, what each change was for, and what is still unresolved — including that it still has no sponsor.

EXTERNAL LINKS

Every reference to some other website, previewed. The link is always the last line — read the card first and decide whether you need the round-trip distraction of visiting the original at all.

1 PROGRAM · THE GRANT ITSELF

Community Economic Growth Grant

Wyoming Business Council · Rural Development Grants · maximum award $10,000

A Wyoming Business Council program funding projects that enhance a community's quality of life through economic development. The ceiling is $10,000. Applications are taken twice a year, on 1 March and 1 September. Leadership grants sit alongside it at $1,500–$2,000 with a ten percent match; the Community Economic Growth Grant is the larger of the two streams.

Why it is cited: it is the source of the ask, and the reason the figure is $10,000 rather than a number somebody chose. The page also carries a stale notice about the program reopening, which is why confirming the cycle by telephone is the first item in column C rather than an assumption.

→ wyomingbusiness.org/communities/financing/rural-development-grant

2 REPORTING · STATE AI INVESTMENT

Laramie County approves a 1.8 gigawatt AI data center

Wyoming Public Media · 14 January 2026

The Laramie County Commission voted unanimously to approve a Crusoe and Tallgrass development outside Cheyenne: a 600-acre data center with a 659-acre power plant, drawing 1.8 gigawatts. Five thousand construction jobs, four hundred permanent positions on completion, gas-fired power and low-water cooling. Construction was expected to start within ninety days.

Why it is cited: it is the scale this proposal is measured against, and it is deliberately not framed as opposition. The point is geographic, not moral — four hundred jobs in Laramie County is four hundred jobs in Laramie County.

→ wyomingpublicmedia.org · 14 January 2026

3 INSTITUTION · THE STATE'S AI PROGRAM

AI4WY — the University of Wyoming AI Initiative

University of Wyoming, Office of the President · Laramie

The university's statewide artificial-intelligence effort, aimed at agriculture, engineering, energy, tourism, wildlife and rural healthcare. It received close to $4 million from the National Science Foundation for computing infrastructure and has funded a first round of twelve internal research projects.

Why it is cited: it is the other half of where the state's AI capacity lives, and the reason this proposal does not duplicate it. AI4WY is research at a university. This is twelve working websites in a county that has neither.

→ uwyo.edu/president/initiatives/ai4wy

4 DATA · WHO THIS IS FOR

Population of Washakie County

U.S. Census Bureau QuickFacts · 2010 and 2020 censuses, 2025 estimate

7,597 people in the July 2025 estimate, against 7,685 at the 2020 census and 8,533 at the 2010 census — some nine hundred fewer than fifteen years earlier.

Why it is cited: it sets the denominator. Ten thousand dollars is a rounding error against a gigawatt-scale development; spread across a county this size it is roughly a dollar and thirty cents a head, which is the honest way to describe the size of this request.

→ census.gov · QuickFacts · Washakie County, WY

5 WORKING EXAMPLE · THE PROOF

worland-dog-law.online

Built in Worland, 2026 · no funding · live

The Worland municipal dog ordinances, set out in plain language, with every claim linked to the ordinance text and an audit noting where the published code and the code in force disagree. A finished instance of the format on a real local subject, built before any grant existed.

Why it is cited: it converts the proposal from a description into a demonstration. A reader who doubts any claim in column A can open it and check, which is the entire argument for the format.

→ worland-dog-law.online

6 METHOD · THE FORMAT

gyro-sites.online

The format, documented as an instance of itself · open license

The specification for the layout this page uses: plain answers, previewed sources and technical detail, side by side on a wide screen, three buttons on a phone, one document in print. It documents itself in its own format, so the description and the demonstration cannot drift apart.

Why it is cited: it is what the pilot program would teach, and it is already free and already published. The grant is not being asked to fund the invention of anything.

```
→ gyro-sites.online
```

7 INFRASTRUCTURE · WHAT IT COSTS TO RUN

GitHub Pages

GitHub · static hosting from a repository · free for public repositories

Serves plain files straight from a folder with no build step and no server. Publishing is a commit. A custom domain is set by putting the domain name in a one-line file. Public repositories are free; only private ones need a paid plan.

Why it is cited: it is the reason the running cost of a finished site is a domain name and nothing else, and the reason the county would not be signing up for a subscription it has to keep paying.

```
→ docs.github.com · What is GitHub Pages?
```

8 REPORTING · THE POLICY WEATHER

Lawmakers talk data centers as developers look to expand in Wyoming

Jordan Uplinger · Wyoming Public Media · 11 May 2026

The Legislature's Select Water Committee met in Cheyenne to hear from state and elected officials on data centers' water use. Cheyenne's mayor put the city's thirteen major data centers at 200 acre-feet a year, 1.48 percent of all the water used in Cheyenne. Speakers debated closed-loop cooling and whether new behind-the-meter power plants would change that footprint; one speaker argued that data centers create jobs and bring tax revenue.

Why it is cited: it shows what the Legislature's data center conversation is about — water, power, jobs and tax revenue where the facilities are built. Rural areas appear in it as places data centers look to for development, not as communities putting the technology to work, which is the gap this pilot program is aimed at.

→ wyomingpublicmedia.org · 11 May 2026

9 REPORTING · THE STATE'S DECLARED POSTURE

Gordon orders "responsible" data center development in Wyoming

Clair McFarland · Cowboy State Daily · 3 June 2026

The Governor issued an executive order directing state agencies to promote responsible development of data centers and other large-load facilities: minimize water use with cooling technology suited to a semi-arid state; balance growth with wildlife and open space; keep the public informed and involved; recognize data centers' importance to national security; protect residential and small-business utility customers from costs that belong to data center builds; "attract investment across Wyoming" with "meaningful benefits for local governments"; prepare citizens for careers in digital infrastructure with the University of Wyoming, community colleges, school districts and businesses; and favor projects that improve their host communities.

Why it is cited: it is the state's own statement of its terms for this industry, and every directive in it concerns data centers themselves — their water, their siting, their cost to utility customers, their benefits to the places that host them, and a workforce to staff them. That is the correct concern for a gigawatt. It is also the gap this proposal points at: no directive in it concerns a county like Washakie putting the technology to work for itself.

→ cowboystatedaily.com · 3 June 2026

10 TOOL · THIS SITE

The setup sheet, switched off

Page D of a GYR-O site · preview copy · not indexed

The sheet a site is filled in from: the header and its one-sentence claim, which picture heads the page, the source cards in their fixed order, and the date of the last link check. It writes the text that goes into the file. In this copy every field is disabled, so nothing can be typed, chosen, copied or published.

Why it is cited: it is the whole of the setup a subject never has to do, shown rather than described. The working sheet belongs to whoever builds the site, and a subject never opens it.

→ washakie-ai.online/setup-preview.html

11 WORKING EXAMPLE · A SECOND SUBJECT

baconian-ciphers.online

Built in Worland, 2026 · a dated series · live

A research record kept in the same three columns: plain answers to what was found, the sources those findings rest on previewed beside them, and the technical detail of the method underneath. Issues are dated and are not revised after publication, so the record of what was believed on a given day survives being wrong.

Why it is cited: it answers the obvious objection to a single example — that the format only suits a municipal code. The subject here is a research program, and the same three columns carry it.

→ baconian-ciphers.online

12 PRICING · THE AI THE SITES ARE BUILT WITH

Claude plans and pricing

Anthropic · claude.com · checked 19 September 2026

Anthropic's price list for Claude. Pro is $17 a month billed yearly, or $20 month to month; Max starts at $100 a month and gives five or twenty times Pro's usage. Every paid plan includes Claude Code, and usage runs in five-hour windows with weekly caps.

Why it is cited: it is the one software cost in the budget, and the reason that line is $1,200: twelve months of Max at $100. Pro would be cheaper, but a long build session can run into its limits.

→ claude.com/pricing

13 EXAMPLE · A SAMPLE OF THE PILOT PROGRAM

East Bench Pivot Farm — a sample farm page

gyro-sites.online/sites/east-bench-farm · an invented farm · 21 September 2026

A page for a farm east of Worland that does not exist, built on everything that does: hay by the bale or the ton, certified weed-free for the Bighorns, beef by the quarter, sugar beets and malt barley under contract. Sixteen source cards cover the county's crops, the water, and the Wyoming rules for selling hay and beef. It is marked SAMPLE across the top.

Why it is cited: it shows what one of the pilot program's twelve sites could look like. We are hoping the county's FFA chapters will want to act as ambassadors for the pilot program.

→ gyro-sites.online/sites/east-bench-farm

14 ORGANIZATION · THE HOPED-FOR AMBASSADORS

2026 Wyoming FFA Chapter Awards Results

Wyoming FFA Association · 2026

Chief Washakie FFA, the chapter at Worland High School, earned a Gold rating and was under consideration for Chapter of the Year. Ten Sleep FFA also earned Gold.

Why it is cited: it is the evidence behind naming the two chapters in column A, and the reason they are the obvious ambassadors for a county of farms. Neither chapter has been approached.

→ association.wyffa.org · 2026 chapter awards

15 EXAMPLE · A SAMPLE OF THE PILOT PROGRAM

Bighorn Basin Tree Service — a sample page for a trade

gyro-sites.online/sites/bighorn-tree-service · an invented company · 24 September 2026

A tree service that does not exist, built on rules that do. Its first answer is the insurance — workers' compensation from Wyoming's state fund, general liability, commercial auto, an arborist credential — and each line carries a link to an independent check rather than a claim. Thirteen source cards cover the state fund, OSHA's ten-foot rule for power lines, the ANSI Z133 safety standard, and the power company's free pruning near its own lines. Marked SAMPLE across the top.

Why it is cited: the farm sample shows the format carrying a place; this one shows it carrying a problem. It is the argument for why a small contractor would want one of the twelve sites.

→ gyro-sites.online/sites/bighorn-tree-service

16 ORGANIZATION · A CANDIDATE SPONSOR

Worland Ten Sleep Chamber of Commerce

801 Big Horn Ave, Suite 120, Worland, Wyoming · (307) 347-3226 · not yet approached

A membership body for the two towns, describing its work as collaboration, advocacy and events designed to drive commerce and keep dollars local. It runs a business directory, posts

local job openings, sells Chamber Bucks to keep spending in the county, and organizes community events. Its own site describes it as a 501(c)(7) organization.

Why it is cited: it is named in column A and column C as a candidate to hold the grant, and its tax designation is the open question about whether it could. Nobody has asked it yet.

→ wtschamber.org

17 LOCAL MEDIA · A WAY TO REACH SUBJECTS

Hometown Matters — a Washakie County podcast

Published weekly since 2024 · past 125 episodes · on Buzzsprout and Spotify

Interviews with local businesses, community event coordinators and activity promoters in Washakie County. Recent episodes cover a sales tax renewal for the city and for senior services, the Giant Pumpkin Weigh Off, and a marijuana education session — which is to say the ordinary business of the county, at one episode a week.

Why it is cited: the pilot program needs twelve subjects to come forward, and this is the county's own standing channel to the people who would be them.

→ hometownmatters.buzzsprout.com

18 GRANT PROGRAM · THE SECOND ROUTE

Rural Business Development Grants

USDA Rural Development · Wyoming state office, Casper · (307) 233-6700

Grants to public bodies, tribes and nonprofits serving rural areas — not to businesses or individuals — for economic development and job creation. Enterprise grants cover training and technical assistance, business counseling and training, market research and feasibility studies. No cost-sharing requirement, no stated maximum, and smaller requests are given higher priority. The area served must lie outside the urbanized periphery of any city of 50,000 or more. The 2026 deadlines were 15 and 30 June. Applicants are told to contact the state office before applying.

Why it is cited: it is the only alternative funder found that takes the same applicant, funds the same activity, and rewards rather than penalizes a small ask. Its later deadline makes it the fallback if 1 March fails.

→ rd.usda.gov · rural business development grants

19 GRANT PROGRAM · CHECKED AND REJECTED

Available Wyoming Grants

Wyoming Humanities · the state humanities council

Culture Grows and Community Culture grants, event sponsorship to $2,500, and educator stipends. Applicants must be a state or federally recognized nonprofit or a state agency with an EIN and UEI — the page says plainly "We can only fund registered non-profits." Projects must be humanities-centered, built around public engagement, include a humanities scholar, and carry a one-to-one match in cash and in kind. The page also states the organization currently has no State of Wyoming appropriation and reduced federal funding.

Why it is cited: it is the obvious-looking option a reader would ask about, and this page would rather record why it was ruled out than leave it unexamined.

→ thinkwy.org/grants

20 REPORTING · THE SAME PROJECT, FIVE MONTHS ON

Crusoe pauses the Cheyenne data center

DataCenterDynamics · 10 June 2026

Crusoe halted development at Project Jade, the 1.8 gigawatt Cheyenne campus approved in January: "At the request of our customer, Crusoe has paused its development activities." The customer was not named and no reason was given. The company called it a pause rather than a cancellation, and announced 4.9 gigawatts of contracted capacity elsewhere the same day. The Wyoming Tribune Eagle reported it locally as Crusoe pulling out of the project.

Why it is cited: it is the second half of source 2, and it is here for honesty rather than for advantage. A proposal that quotes the January approval and leaves out the June pause would be quoting the half that suits it. The scale of the contrast is unchanged — Prometheus alone has 1,500 megawatts planned at Casper and 1,200 at Evanston — but the reader is entitled to know that the single project named above is not currently being built.

→ datacenterdynamics.com · 10 June 2026

21 REFERENCE · THE HISTORY OF NOTES

Note (typography)

Wikipedia · citing Chuck Zerby, The Devil's Details: A History of Footnotes

What notes are and how they are set. On origins it is careful rather than sweeping: Zerby identifies Richard Jugge's 1568 printing of the Bishops' Bible, where the marks (f) and (g) in

Job send the reader to notes at the foot of the page, as an early example. It does not claim a single inventor.

Why it is cited: for the date, and for the limits of the date. The claim is only that sending a reader away from the sentence is a habit four and a half centuries old, not that anybody invented it on a particular morning.

→ en.wikipedia.org/wiki/Note_(typography)

C HOW IT WORKS (DETAILS) ✓

Prior know-how is assumed here, and the items become more “technical” toward the bottom.

The shape of the pilot program

Twelve months, twelve sites, four workshops, one published method. The unit of work is a single subject — one office, one ordinance, one trade, one question — and the finished page is one HTML file of about fifty kilobytes, styles and scripts inside it, that renders before a loading spinner would have appeared. Around that page sit an icon, a social card and two or three short text files; a subject that needs more than one page gets more than one page, as worland-dog-law.online does[5].

Nothing in the pilot program creates an ongoing obligation for the county. The county subscribes to no platform, keeps no account and is locked into no vendor. The pilot program’s one subscription, the AI the sites are built with, ends when the pilot program does, and no second year of funding is contemplated.

The workshops are the second half of the work. Four of them, open to anyone, with the work done in the room rather than described. Their purpose is not publicity. It is to leave a few people in the county who have built a page themselves and can make a change for a neighbor afterward — a light introduction to AI, and the beginning of local support for the twelve subjects, who otherwise have only the person who built their site to ask. The group most likely to carry that afterward is the Future Farmers of America — two chapters in this county, both rated Gold in 2026[14] — but neither has been approached, and nothing here is built on the assumption that they will say yes.

Where the money goes

Ten thousand dollars, allocated before the application rather than after the award[1]:

```
12 sites @ $450           $5,400
4 public workshops        $1,600
Method, guides, handover    $800
Claude Max, 12 months     $1,200
Domains, 12 x 2 years       $360
Materials and rooms         $400
Contingency                 $240
```

```
                    ---------
                      $10,000
```

The $450 per site is production, not software: reading the source material, writing the plain-language column, building and verifying every source card, and sitting down with the subject to hand it over. Hosting and certificates are free[7]. The one piece of software the pilot program pays for is the AI the sites are built with: a Claude Max plan at $100 a month[12], chosen over the cheaper Pro plan because building a site is a long working session and Pro's usage limits can stop one partway through. It ends when the pilot program does. The work is still the cost.

Who applies, and why that is the first problem

The program funds communities and organizations. An individual cannot be the applicant, so the pilot program needs a local sponsor to carry it — realistically the City of Worland, Washakie County, the county library, the school district, the Worland Ten Sleep Chamber of Commerce[16], or a local economic development organization. That conversation has to happen before the paperwork, not alongside it. Which entity types qualify is a question for the Business Council rather than an assumption to be made here.

The Chamber is the most natural fit on that list and also the least certain. Natural, because its stated purpose is strengthening local businesses and keeping dollars local, and because twelve small-business websites plus four public workshops is that purpose in physical form. Uncertain, because its own site describes it as a 501(c)(7) organization, which is the designation for a social or recreational club rather than the 501(c)(6) a chamber of commerce usually holds[16]. Whether that affects eligibility is not something to guess at: it is a question for the Chamber and then for the Business Council, and it should be asked in that order.

The school district is worth naming separately, because it is the one sponsor with something to gain rather than a favor to do: several of the twelve subjects could be high school students publishing their first piece of work that anyone outside the building can see.

The sponsor is not being asked for money or staff time. It is being asked to hold the grant and receive the deliverables, which are public artifacts it would own outright at the end.

The calendar

- **Now** — confirm the grant cycle by telephone; find and brief a sponsoring organization; assemble a first list of willing subjects.
- **Also now, and cheap** — ask to go on *Hometown Matters*, the county's weekly podcast, which has been interviewing local businesses and event organizers since 2024 and has run past 125 episodes[17]. Twelve subjects have to come forward for any of this to work, and that is a room where they already are.

- **1 March** — application deadline, next cycle.
- **After 1 March** — review, then the award. How long that takes is not published[1], and it is the first question on the telephone call. Nothing below it starts until the award lands.
- **Months 1–3**, counted from the award — workshop one; first three sites.
- **Months 4–9** — workshops two and three; six more sites.
- **Months 10–12** — workshop four; final three sites; method published and handed over.

The 1 September deadline for the current year has passed. The next is 1 March, which is a schedule rather than a delay: it leaves time to secure a sponsor and line up subjects, and a pilot program that arrives with twelve willing participants already named is a materially stronger application than one that promises to find them.

The months in that list are counted from the award and not from the deadline. The wait between the two is the one date in this plan that somebody else controls, and until it is known the twelve months can be placed on a calendar only as a shape, not as dates.

How anyone would know whether it worked

Stated in advance, because a measure invented afterward is not a measure:

- **Sites live and reachable** twelve months after the award, each on its own domain, each owned by its subject.
- **Sites still standing** six months after that, without further intervention — the real test of a thing that costs a couple of dollars a month to keep.
- **Attendance** at the four workshops, counted honestly, including the ones nobody comes to.
- **A thirteenth site built by somebody else**, from the published method, without asking for help. That is the only measure that matters, and the only one that cannot be manufactured.

What the county owns at the end

Twelve working sites, held by their subjects. A written method in the public domain. Twelve domain names paid two years forward. And a demonstration, in a county of 7,600 people[4], that the useful end of this technology is not a building full of servers — it is a rancher with a page that proves what he says.

Why this is cheap

Because none of the expensive parts are being bought. The layout already exists and is published free[6]. The hosting is free for public repositories[7]. The certificates are free and automatic. The

fonts are open-licensed. A finished site has no database, no backend, no login and no dependency that can be withdrawn.

What remains is the labor of reading a source carefully and writing it down honestly, and that is the part AI genuinely accelerates — not by inventing content, but by doing in an afternoon the reading and drafting that used to take two weeks, with every claim still traceable to the document it came from.

Risks, stated plainly

- **No sponsor comes forward.** The most likely failure, and the earliest. Mitigation is to ask early and ask several.
- **One funder, one deadline.** Until recently this page named a single place to apply, which is a poor bet on a competitive program. The second route, and the one that was checked and rejected, are set out in column A[18].
- **Fewer than twelve subjects volunteer.** Then fewer sites are built and the unspent portion is returned. A padded count would be worse than a short one.
- **The program is closed or changed.** The grant page carries a stale reopening notice[1], which is exactly why it gets confirmed by telephone before anything else is done.
- **The sites are built and then ignored.** Possible. It is why the six-month survival check is in the measures above, and why subjects are asked to come forward rather than being recruited.

This page

This proposal is written in the new format it proposes to introduce into the county. Every reference in this proposal is attached to a card in column B naming where it came from. That is not a stylistic choice — it is the argument. A grant application that cannot show its own sources has no business asking for money to teach other people to show theirs.

Technical Colophon
